

1. Architecture

REQ-001 The Event database shall store event records.

1.1 Event worker

REQ-002 The Event worker shall read event records from the Event database.

1.2 Notification service

REQ-003 The Notification service depends on the Event worker and shall publish alert events.

See Section 1.1 for the worker contract.

2. Interfaces

| Interface | Direction |

|-----|-----|

| event records | read |

API (Application Programming Interface)

3. Open questions

TBD: choose an appropriate retry schedule.

4. Reliability

REQ-004 The Notification service should retry as needed.

Application Programming Interface (API)

Ref: interface-v1

See Section 99.9.

TODO: latency budget.
